PROFESSIONAL SUMMARY

Machine Learning and Data Science Honours student with hands-on experience building, evaluating, and deploying ML/NLP systems. Skilled in time-series forecasting, text classification, and HR-tech screening. Strong Python stack with Streamlit deployments and Git/GitHub workflows. Interests include fraud detection and financial analytics. Combines technical expertise with teaching experience in mathematics, enhancing communication and analytical skills.

EXPERIENCE

Eduvos — Mathematics Tutor

May 2026 – Jun 2026 · Part-time

- Tutored Calculus 1 students, providing one-on-one and group support to reinforce foundational mathematical concepts and problem-solving techniques.
- Developed personalized learning strategies and study plans to improve student performance and comprehension.
- Assisted students in applying mathematical principles to real-world scenarios in computer science and data analysis.
- Strengthened communication and mentoring skills while fostering a supportive learning environment.

Future Interns — Machine Learning Intern

Jan 2026

- Task 01: Built an end-to-end Sales & Demand Forecasting solution (Superstore dataset) with time-based feature engineering, multi-model comparison (SES, Holt/Holt-Winters, ARIMA/SARIMA, intermittent demand, Prophet, Amazon Chronos), and evaluation using RMSE/MAE/MAPE; deployed an interactive Streamlit app.
- Task 02: Developed a Support Ticket Classification system (IT/HR/Transport) using NLP preprocessing and ML classification to improve routing speed and accuracy.
- Task 03: Built an AI Resume Screening system using Python, NLP, NLTK, and React.js to extract resume text, match to job descriptions, and generate ATS-style scores with structured feedback and improvement tips.

EDUCATION

Bachelor of Science Honours in Data Science, Eduvos

Jan 2026 – Dec 2026

Focus: Machine Learning, AI, Statistical Modeling, Data Engineering

Bachelor of Science in Data Science, Eduvos

2023 – 2025

TECHNICAL SKILLS

Programming: Python, SQL, R, C++

Machine Learning: Regression, Classification, Neural Networks, Time Series, Model Evaluation

NLP: NLTK, TF-IDF / vectorization, text preprocessing, similarity scoring

Frameworks & Tools: scikit-learn, TensorFlow, PyTorch, Pandas, NumPy, Streamlit, Git/GitHub, Jupyter

SELECTED PROJECTS

- Credit Card Fraud Detection System — Compared models (Logistic Regression, Random Forest, Gradient Boosting, SVM, Neural Networks) and deployed a Streamlit dashboard.
- AI Stock, Forex & Crypto Forecasting App — Built forecasting models using Prophet, ARIMA, LSTM/GRU for financial time-series analysis.
- Sentiment Analysis Tweets Web App — Streamlit NLP app for real-time tweet sentiment analysis.
- Human Emotion Detection — Computer vision pipeline using YOLO and TensorFlow for facial emotion classification.
- AI Resume Screener — ATS-style resume screening with NLTK preprocessing and structured feedback generation.

CERTIFICATIONS

- IBM Machine Learning Professional Certificate
- IBM Deep Learning with PyTorch, Keras & TensorFlow
- Introduction to Neural Networks and PyTorch (IBM)
